EMT Development Agreement Announcement/News Release

Green Bay Wisconsin, December 14, 2009

EMT International has reached a development agreement with Romeoville Illinois based ILF Technologies.

EMT International, a leading supplier of tight web digital finishing solutions to the Graphics Industries, has reached agreement with ILF Technologies for the development of new wide web digital finishing solutions for the high speed roll-fed digital print market. ILF Technologies a well known supplier of quality Sheeting, Stacking and Inline finishing products for the traditional Web Offset and Direct Mail Markets has over 500 installations worldwide.

The agreement allows EMT International to exclusively incorporate existing ILF product technology, into new digital products. This will allow for future web finishing at speeds of over 1000 feet per minute and web widths ranging from thirty to sixty inches into EMT International's broad tight web product offering to the Digital market. A collaborative effort between EMT and ILF engineering will produce sheeting, stacking and inline finishing technology aimed at providing digital finishing productivity at speeds and web widths not commonly offered in the digital print market. EMT International will continue to build and design high speed web processing solutions including perforating, punching and winding, optimizing a full array of web management, processing and finishing capabilities to meet the market's current and future demands. The goal of the partnership is to continue to provide the Digital Print market with the next step in cost efficient and productive web processing and finishing

EMT International will provide all service and spare parts management and will own all technical design rights.
